Profile

Hands-on Automotive and Motorsport Engineering graduate (BEng Hons, 2:1) with a practical background built at Silverstone UTC and developed through university design projects, workshop builds, and real-world mechanical work. Comfortable with fabrication, assembly, and electrical systems — from machining components on a CNC to wiring and converting an e-bike from scratch. Holds a Level 5 CMI qualification in Leadership and Management alongside the engineering degree. Eager to apply mechanical and motorsport knowledge in a fast-paced, high-standard environment.

Education and Qualifications

2021–2025 — University of Huddersfield

BEng (Hons) Automotive and Motorsport Engineering — 2:1

Relevant Modules:

- Automotive Design
- Engine Systems
- Manufacturing and Enterprise
- Analysis of Materials
- Project Quality and Production Management

Additional Qualification: Level 5 CMI Leadership and Management

2019–2021 — Silverstone UTC

EAL Triple Engineering — Distinction

2013–2019 — Walton High School

8 GCSEs including Maths and English

Projects

Design and Build of an E-Scooter — Silverstone UTC

Designed and built a fully functional e-scooter from concept to completion — produced CAD drawings, machined components to specification, and assembled the finished unit under tight deadlines and limited resources.

E-Bike Conversion (Personal Project)

Converted a standard bicycle to electric power using a Swytch kit — sourced components, handled wiring and motor integration, and configured the system for reliable daily use. Practical introduction to EV drivetrain and electrical assembly.

Project Car Restoration — Recently sold

Ongoing mechanical restoration of a project car: diagnosing faults, stripping and rebuilding systems, sourcing parts, and working through mechanical and electrical issues systematically.

High-Performance Bike Seat Design — University Group Project

Collaborated in a cross-functional team to design a high-performance bike seat, coordinating design iterations through structured meetings and ensuring component compatibility across workstreams.

Wind Farm Feasibility Study — Final Year Dissertation

Full feasibility study covering turbine design selection, manufacturing and construction planning, maintenance strategy, and quantitative energy output modelling.

Technical Skills

- SolidWorks (part and assembly modelling, FEA, simulation)
 - AutoCAD Inventor (design and engineering drawings)
 - CNC machining
 - Mills and Lathes
 - MATLAB
 - Technical report writing
 - General IT / Productivity tools
-

Employment History

CAD Designer — Inventor Technical Services (*ADHOC*)

- Produced detailed designs and engineering drawings for drill tabletops using AutoCAD Inventor
- Delivered production-ready technical drawings to industry standard

Crew Member — Tim Hortons, Milton Keynes (*2023–2024*)

- Customer-facing, high-volume environment requiring reliability and attention to detail

Track Marshal — Daytona Kart Track, Milton Keynes (*Summer 2022*)

- Maintained and prepared a variety of kart types for customer sessions: fuel, oil, and lubrication checks
- Applied COSHH guidance when handling specialised liquids and chemicals
- Managed safe use of pit lane and responded to incidents on track
- Communicated with other marshals and race control under pressure

Pool Lifeguard — Leon School, Milton Keynes (*2019–2021*)

- Safety monitoring, maintenance, hygiene standards, and customer communication

Interests and Hobbies

Tennis, Ultimate Frisbee, swimming. Regularly compete in online Sim races
